

Rosacea : Rhinophyma

10/7/2020

My name is Wang Lei, I am 46 years old and I am from Handan City, Hebei Province, China! About ten years ago, my nose was covered with mites, also called rosacea!

I have a decent career. I often have meetings and meet important people! So, I visited Beijing and some other well-known big hospitals many times, but the effect has always been good and bad, and the illness recurs!

Since my friend recommended Dr. Lin, he sent me some medicines from the United States to apply to the nose and sides. I already feel better, and my nose no longer feels unbearable tingling! My mood is also very good!

I am especially grateful to Dr. Lin. I think Dr. Lin's medical technology is unprecedented in major hospitals across China. At the same time, I am really lucky because Dr. Lin has cured my nose skin problem that I have had for ten years!

Thank you very much for the intelligent doctor, Dr.Lin!

Remark: Dr. Lin Does Not Treat a specific condition, instead of helping the body's natural Self-Healing and Self-Regulating functions.
